A: sample-based saxophone libraries often link dynamics to fingering, but these two elements are fully independent Not always. Saxophone fingering patterns usually follow some sort of chord-based pattern that provides a rhythmic basis for the notes. The more advanced players with experience in a wide array of saxophones do use a significant amount of dynamics. Some are here or here for example. A: The way a saxophone works is based primarily on the diameter of the tubing as well as the size/pressure of the lip, side, belly, bell and reed. So, it's possible to take a a medium side blowing saxophone and put it into a small single reed mouthpiece, and get a "full" horn sound. If you put a saxophone made for a small reed mouthpiece into a small reed mouthpiece, it'll still only sound like a small reed saxophone. I've done this and you can hear it on my Instagram here: How important dynamics is to the sound of a saxophone is largely up to how loud the performer is. In most cases, a saxophone really doesn't need to be as loud as a trumpet or trombone because the mouthpiece isn't much larger than a small reed mouthpiece, and the sax player is much closer to the mouthpiece than they are to the reed. It's only when a saxophone is relatively quiet that the reed becomes important. So in your question, I'd say it really depends on the performer. But, in general, you can create different sounds with less reed by keeping the saxophone fairly quiet and by hitting things like lips, bell and mouthpiece harder. Coastal Visitors Increasing numbers of tourists are checking into the least known and most stunning coastline in Western Europe. Britain's rocky natural harbours and craggy islands are beautiful enough without the intrusion of holiday homes on foreshore land, which often masks the spectacular cliff faces of rock stacks, ancient volcanic plugs and arches, extensive reefs and extensive tidal expanses. Coastal strips of land in Great Britain, Ireland and the Isle of Man are vanishing without a trace as people try to cash in on the area's tranquillity by developing new homes. In Scotland, the Royal National Mission to End Rural Poverty (RoNEP) includes f678ea9f9e
